

# Danish Maritime Technology Conference

Danish Maritime Technology Conference  
gathers the maritime world for two short  
conference days focusing on new and  
innovative maritime technologies.

The conference takes place 2 and 3 May at The Train Workshop (Lokomotivværkstedet) - same location as Danish Maritime Fair and many other activities during Danish Maritime Days 2018.

New technologies and business methods are constantly introduced within the maritime industry. Maritime players must be ready for changes, open-minded and innovative, and they must be able to act faster than ever before. With keynote speakers and introductory speakers from at home and abroad Danish Maritime Technology Conference brings together national and international maritime stakeholders and focuses on digitalization, new technologies and competences that comply with increasingly smarter, greener and more intelligent maritime systems.

## Programme
